The following individuals made valuable contributions to the development of this publication:

Robert Seeman, Senior Nosologist, Commission on Professional and Hospital Activities (CPHA),
Nancy Ramirez, Medical Systems Specialist, Healthcare Knowledge Resources,
Robert Travis, Librarian.

We offer a special thank-you to the following individuals for their assistance:

Ruth Blumenauer, Stacey Cavanaugh, Fran Metz, Peggy Meyer, Connie Prouty, Kris Reutter, and Sally Smith.

Finally, we gratefully acknowledge the hospitals and state organizations that support this and other publications by making their data available.

INTRODUCTION

Healthcare Knowledge Resources is the official developer and distributor of products derived from the clinical research and classification development activities of the Commission on Professional and Hospital Activities (CPHA). Now in its fourth decade as a reliable source for clinical record information, CPHA retains ownership of its databases and classification systems while Healthcare Knowledge Resources develops and markets high quality, information-oriented products and services to the healthcare industry and related fields.

Healthcare Knowledge Resources offers a range of information products, available through books, magnetic media, and educational seminars. The Length of Stay series is one of a number of data reference tools providing performance guidelines for a variety of healthcare settings.

Length of Stay data has been available from CPHA since 1963. This book is one volume in a set of seven books presenting statistics on hospital stay during 1989 in the United States. The complete set is the latest in a series of publications on length of stay in hospitals that participate in the Professional Activity Study (PAS) of the Commission on Professional and Hospital Activities. Data from other organizations contributing to CPHA are also included in the 1989 series.

In addition to *Length of Stay by Diagnosis and Operation*, other titles in the Cost Containment Series include: *Psychiatric Length of Stay* and *Length of Stay by DRG and Payment Source*. Each series is available on an annual basis for the United States, Northeastern, North Central, Southern, and Western regions. *Pediatric Length of Stay* (19 years and under) and *Geriatric Length of Stay* (65 years and over) are also available in the Diagnosis and Operation series for the United States.

These statistics, also available on magnetic tape, provide a valuable perspective for utilization review, quality assurance professionals, physicians, consultants, hospital administrators, third party payors, and researchers interested in cost containment and quality care.

DESCRIPTION OF THE DATABASE

Source of the Data

Data in the Length of Stay tables were compiled from individual patient discharge records submitted by hospitals participating in the Professional Activity Study (PAS). In addition, discharge data from hospitals participating in information systems other than PAS are included.

The following steps describe the PAS method of storing and retrieving medical data:

1. In each participating hospital, personnel transfer data from the medical record of each discharged patient into the PAS System via PAS+ microcomputer or magnetic tape.
2. The disk or tape is mailed to the center of PAS operations in Ann Arbor, Michigan, where it is entered into the computer system.
3. Data undergo a comprehensive editing process and errors are corrected.
4. The computer system continually adds data to a permanent file. Participating hospitals are provided access to these data through interactive systems, in-house computers, and reports. The stored data are also available to researchers on a contractual basis.
5. Data are standardized to create an aggregated patient record base.

Annually these data are utilized to create the Length of Stay series and other reference tools.

Data Quality

Data quality is a primary concern. Although the hospital has basic responsibility for the quality of PAS data, considerable effort is exerted to prevent and correct errors. Over 600 automated checks are performed during the processing of each record to ensure the reasonableness of the data. Examples of discrepancies detected by the audit are: hospital day of operative episode exceeding total stay, cesarean section with a normal delivery diagnosis, sex-specific diagnosis or operation with the wrong sex recorded, incalculable age or stay, unrecorded or invalid diagnosis. When illogical, invalid, or missing data are detected, about 40 percent of the errors are corrected by computer. The remainder are referred back to hospital staff through computer-generated error messages.

In addition to initial data editing, numerous edits are done to eliminate uncorrected or unusual data. The following events cause a record to be excluded as not representing a typical short-term patient:

1. death, stillborn
2. admission from other short-term hospital
3. discharge to other short-term hospital
4. discharge against medical advice

Hospital Characteristics

Data chosen for inclusion in the Length of Stay series are from general, nonfederal, short-term hospitals in the United States. The American Hospital Association (AHA)[1] defines these characteristics in the following manner:

> **General** – The primary function of the institution is to provide patient services, diagnostic and therapeutic, for a variety of medical conditions.
>
> **Nonfederal** – Controlled by state, county, city, city-county, hospital district or authority, church.
>
> **Short-term** – The average length of stay for all patients is less than 30 days, or over 50 percent of all patients are admitted to units where the average length of stay is less than 30 days.

Most data used in the Length of Stay tables are from hospitals participating in PAS. In addition, the following organizations have sent data: Colorado Hospital Association, Hospital Association of New York State, Michigan Hospital Association, The National Association of Children's Hospitals and Related Institutions, Inc. (NACHRI), New Hampshire Hospital Association, Oregon Hospital Association, Southern Kaiser Foundation Hospitals, Vermont Hospital Association and Wyoming Hospital Association. Several individual hospitals throughout the United States have also sent data for special studies.

Hospitals participating in PAS from United States Territories and Puerto Rico are excluded from the series. Data from long-term specialty institutions, e.g., long-term psychiatric or rehabilitation facilities, are excluded because these facilities are not general hospitals. Data from psychiatric units within general hospitals are included. Pediatric hospitals are also included.

The characteristics of all hospitals with discharge data included in the Length of Stay tables are displayed in Appendix A. Definitions of hospital characteristics are provided in Appendix B and the states included in each region are listed in Appendix C.

ORGANIZATION OF THE TABLES

Classification System

The tables in each regional and national volume are organized according to CPHA's diagnosis and procedure classification system. The **Diagnosis** classification system is called *ICD-9-CM List A: Hospital Diagnosis Groups*[1]. Within each diagnosis group, patients are stratified by single or multiple diagnosis, operated or nonoperated status, and age. For diagnosis groups 411-413, which pertain exclusively to newborns, age is replaced by birth weight in grams. The **Operation** classification system is called *ICD-9-CM List B: Hospital Procedure Groups*. Within each procedure group, patients are stratified by single or multiple diagnosis and age.

Patient Data Assignment

Patient data are assigned an *ICD-9-CM* List A group on the basis of the principal diagnosis. This is the diagnosis that, after study, explains why the patient was admitted to the hospital. Patient data are assigned *ICD-9-CM* List B groups on the basis of the principal procedure. The principal procedure is one that was performed for definitive treatment rather than one performed for diagnosis or exploratory purposes, or was necessary to take care of a complication.[2]

Definition of Multiple Diagnosis Patients

Patients are classified in the multiple diagnosis category if they had at least one valid secondary diagnosis in addition to the principal one. The following codes are not considered valid secondary diagnoses for purposes of this classification:

1. Manifestation codes (conditions that evolved from underlying diseases [etiology] and are in italics in *ICD-9-CM* Volume 1)[3]
2. Codes V27.0-V27.9 (outcome of delivery)
3. E Codes (external causes of injury and poisoning)

Definition of Operated Patients

In the diagnosis tables operated patients are patients who had at least one significant surgical procedure. The procedure may or may not relate to the principal diagnosis.

In the procedure tables operated patients are those whose principal procedure fell into an *ICD-9-CM* List B group where at least one significant procedure was present. These tables contain procedures which are either therapeutic to the principal diagnosis or the only procedure listed.

While most List B groups contain only significant procedures, the following tables contain significant, as well as other procedures: 547, 556, 575, 576, 582, 587, 609, 615, 621, 628, 632, 641, 652, 653, 661, 674, 687, 690, 694, 698, 704, 716, 717, 774, 775, 777, 778, 782, 783. Because of their mixed composition, these tables are included for information purposes only.

List B tables which contain no significant procedures are identified with a disclaimer explaining why these tables cannot be used for purposes of examining length of stay.

[1] *ICD-9-CM List A: Hospital Diagnosis Groups* and *ICD-9-CM List B: Hospital Procedure Groups* are based on the *International Classification of Diseases, 9th Revision, Clinical Modification*, Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1989.

[2] As defined by the American Hospital Association in the 1984 Revision of the Uniform Hospital Discharge Data Set.

[3] *International Classification of Diseases, 9th Revision, Clinical Modification, Volume 1, Diseases: Tabular List*, Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1989.

EXPLANATION OF THE STATISTICS

The List A diagnosis group titles and List B procedure group titles heading the tables are followed in parentheses by the *ICD-9-CM* diagnosis or procedure codes included in that List A or List B group. Supplemental *ICD-9-CM* codes for specified diagnosis and operation groups are provided in Appendix D.

Data are categorized by total number of patients, average length of stay, variance, and distribution percentiles. Patients are stratified by single or multiple diagnoses (Dx), operated or not operated status, and age. In addition, two subtotals and a grand total are included.

Total Number of Patients

This number represents the total number of patients in the stratified group. Patients with stays over 99 days (99+) are not included.

Average Length of Stay

The length of stay is calculated from the admission and discharge dates by counting the day of admission as the first day. The average is figured by adding the lengths of stay for each patient and then dividing by the total number of patients. Patients discharged on the day of admission are counted as staying one day in the calculation of average length of stay. Patients with stays over 99 days (99+) are excluded from this calculation.

Variance

The variance is a measure of the spread of the data around the average. The smallest variance is zero, indicating all lengths of stay are equal.

When using tables in which there is a large variance, and the patient group size is relatively small, the average stay may appear high. This sometimes occurs when one or two patients with long hospitalizations fall into the group.

Distribution Percentiles

A length of stay percentile for a stratified group of patients is determined by arranging the individual patient stays from low to high. Counting up from the lowest stay to the point where half of the patients have been counted yields the value of the 50th percentile. Counting off one-tenth of the total patients gives the 10th percentile, and so on.

The 10th, 25th, 50th, 75th, 90th, 95th, and 99th percentiles of stay are displayed in days. If, for example, the 10th percentile for a group of patients is four, it means that 10 percent of the patients stayed four days or less. The 50th percentile is the median. Any percentile with a value of 100 days or more is listed as 99+.

Patients who were hospitalized 99+ days or longer are not included in the total patients, average stay, and variance categories. The percentiles, however, do include these patients.

Subtotal and Grand Total

The subtotal represents the total patients in each of the single or multiple diagnosis, operated or not operated categories. The Grand Total represents the total number of patients in the specified diagnosis or procedure category.

USING THE TABLES

The Length of Stay series can be used as a valuable supplement and reference in a variety of healthcare settings. Use of hospital stay data as an inpatient utilization measure allows the healthcare professional to compare regional and national norms to an individual institution or special population. The Length of Stay series assists in:

- projecting extended stay reviews,
- identifying candidates for utilization review,
- establishing baselines,
- developing forecasts, and
- service planning.

The following steps provide a guide for healthcare professionals to obtain specific length of stay norms by using one of the Length of Stay regional or national volumes:

Step 1: Consult the Diagnosis or Operation Index at the back of the book to determine the group number of the particular diagnosis or operation to be reviewed.

Step 2: Find the corresponding group number (table number) in the Length of Stay tables; the group number precedes the title of each table.

Step 3: Find the appropriate portion of the table for review:

- Single or Multiple Diagnosis
- Not Operated or Operated (for Diagnosis groups only)
- Patient's Age (on day of admission)

Step 4: Find the 50th percentile of stay for similar patients at the point where the 50th percentile column of the table intersects the horizontal line containing the pertinent patient variables.

Step 5: Consult the total patient sample and variance to consider the homogeneity of the data, i.e., to what extent length of stay averages are clustered or spread out within a particular patient group.

These general steps can be followed, with more specific applications, by healthcare professionals in many diverse settings.

[3] The percent of hospitals may be underestimated since the 1989 sample is compared to the universe of hospitals in 1988.

APPENDIX B

DESCRIPTION OF HOSPITAL CHARACTERISTICS

Region and Census Division

The regional volumes of the Length of Stay series are defined by four census regions: Northeast, North Central, South, and West.

Location: Urban/Rural Hospitals

Urban hospitals are those with a metropolitan statistical area designation on the 1988 AHA Annual Survey of Hospitals magnetic tape. Hospitals without a metropolitan statistical area designation represent rural hospitals.

Teaching Intensity

The teaching designation is determined by a weighted index measuring program intensity developed by Phillip and Hai.[1] The index is based on programs, memberships, and affiliations approved by various bodies. The approvals incorporated in the index are:

- Accreditation by Joint Commission on Accreditation of Healthcare Organizations
- Cancer Program approved by American College of Surgeons
- Residency approved by American Medical Association
- Medical School Affiliation reported by American Medical Association
- Hospital-controlled professional nursing school, reported by National League for Nursing
- Member of Council of Teaching Hospitals of the Association of American Medical Colleges

Based on this index, hospitals are classified by one of three teaching status groups:

1. Low Teaching Intensity Hospitals
2. Medium Teaching Intensity Hospitals
3. High Teaching Intensity Hospitals

Index

Part I: Diagnosis Index
Part II: Operation Index

If a diagnosis or operation does not appear in the Index, its corresponding *ICD-9-CM* code can be found in the *International Classification of Diseases, 9th Revision, Clinical Modification,* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1989, *Volume 2 Diseases: Alphabetic Index* or *Volume 3 Procedures: Tabular List and Alphabetic Index*. New *ICD-9-CM* codes added in 1989 are reflected in this index.

PART I: DIAGNOSIS INDEX

Finally, we gratefully acknowledge the hospitals and state organizations that support this and other publications by making their data available.

INTRODUCTION

Healthcare Knowledge Resources is the official developer and distributor of products derived from the clinical research and classification development activities of the Commission on Professional and Hospital Activities (CPHA). Now in its fourth decade as a reliable source for clinical record information, CPHA retains ownership of its databases and classification systems while Healthcare Knowledge Resources develops and markets high quality, information-oriented products and services to the healthcare industry and related fields.

Healthcare Knowledge Resources offers a range of information products, available through books, magnetic media, and educational seminars. The Length of Stay series is one of a number of data reference tools providing performance guidelines for a variety of healthcare settings.

Length of Stay data has been available from CPHA since 1963. This book is one volume in a set of seven books presenting statistics on hospital stay during 1989 in the United States. The complete set is the latest in a series of publications on length of stay in hospitals that participate in the Professional Activity Study (PAS) of the Commission on Professional and Hospital Activities. Data from other organizations contributing to CPHA are also included in the 1989 series.

In addition to *Length of Stay by Diagnosis and Operation*, other titles in the Cost Containment Series include: *Psychiatric Length of Stay* and *Length of Stay by DRG and Payment Source*. Each series is available on an annual basis for the United States, Northeastern, North Central, Southern, and Western regions. *Pediatric Length of Stay* (19 years and under) and *Geriatric Length of Stay* (65 years and over) are also available in the Diagnosis and Operation series for the United States.

These statistics, also available on magnetic tape, provide a valuable perspective for utilization review, quality assurance professionals, physicians, consultants, hospital administrators, third party payors, and researchers interested in cost containment and quality care.

DESCRIPTION OF THE DATABASE

Source of the Data

Data in the Length of Stay tables were compiled from individual patient discharge records submitted by hospitals participating in the Professional Activity Study (PAS). In addition, discharge data from hospitals participating in information systems other than PAS are included.

The following steps describe the PAS method of storing and retrieving medical data:

1. In each participating hospital, personnel transfer data from the medical record of each discharged patient into the PAS System via PAS+ microcomputer or magnetic tape.
2. The disk or tape is mailed to the center of PAS operations in Ann Arbor, Michigan, where it is entered into the computer system.
3. Data undergo a comprehensive editing process and errors are corrected.
4. The computer system continually adds data to a permanent file. Participating hospitals are provided access to these data through interactive systems, in-house computers, and reports. The stored data are also available to researchers on a contractual basis.
5. Data are standardized to create an aggregated patient record base.

Annually these data are utilized to create the Length of Stay series and other reference tools.

Data Quality

Data quality is a primary concern. Although the hospital has basic responsibility for the quality of PAS data, considerable effort is exerted to prevent and correct errors. Over 600 automated checks are performed during the processing of each record to ensure the reasonableness of the data. Examples of discrepancies detected by the audit are: hospital day of operative episode exceeding total stay, cesarean section with a normal delivery diagnosis, sex-specific diagnosis or operation with the wrong sex recorded, incalculable age or stay, unrecorded or invalid diagnosis. When illogical, invalid, or missing data are detected, about 40 percent of the errors are corrected by computer. The remainder are referred back to hospital staff through computer-generated error messages.

In addition to initial data editing, numerous edits are done to eliminate uncorrected or unusual data. The following events cause a record to be excluded as not representing a typical short-term patient:

1. death, stillborn
2. admission from other short-term hospital
3. discharge to other short-term hospital
4. discharge against medical advice

Hospital Characteristics

Data chosen for inclusion in the Length of Stay series are from general, nonfederal, short-term hospitals in the United States. The American Hospital Association (AHA)[1] defines these characteristics in the following manner:

> **General** – The primary function of the institution is to provide patient services, diagnostic and therapeutic, for a variety of medical conditions.
>
> **Nonfederal** – Controlled by state, county, city, city-county, hospital district or authority, church.
>
> **Short-term** – The average length of stay for all patients is less than 30 days, or over 50 percent of all patients are admitted to units where the average length of stay is less than 30 days.

Most data used in the Length of Stay tables are from hospitals participating in PAS. In addition, the following organizations have sent data: Colorado Hospital Association, Hospital Association of New York State, Michigan Hospital Association, The National Association of Children's Hospitals and Related Institutions, Inc. (NACHRI), New Hampshire Hospital Association, Oregon Hospital Association, Southern Kaiser Foundation Hospitals, Vermont Hospital Association and Wyoming Hospital Association. Several individual hospitals throughout the United States have also sent data for special studies.

Hospitals participating in PAS from United States Territories and Puerto Rico are excluded from the series. Data from long-term specialty institutions, e.g., long-term psychiatric or rehabilitation facilities, are excluded because these facilities are not general hospitals. Data from psychiatric units within general hospitals are included. Pediatric hospitals are also included.

The characteristics of all hospitals with discharge data included in the Length of Stay tables are displayed in Appendix A. Definitions of hospital characteristics are provided in Appendix B and the states included in each region are listed in Appendix C.

ORGANIZATION OF THE TABLES

Classification System

The tables in each regional and national volume are organized according to CPHA's diagnosis and procedure classification system. The **Diagnosis** classification system is called *ICD-9-CM List A: Hospital Diagnosis Groups*[1]. Within each diagnosis group, patients are stratified by single or multiple diagnosis, operated or nonoperated status, and age. For diagnosis groups 411-413, which pertain exclusively to newborns, age is replaced by birth weight in grams. The **Operation** classification system is called *ICD-9-CM List B: Hospital Procedure Groups.* Within each procedure group, patients are stratified by single or multiple diagnosis and age.

Patient Data Assignment

Patient data are assigned an *ICD-9-CM* List A group on the basis of the principal diagnosis. This is the diagnosis that, after study, explains why the patient was admitted to the hospital. Patient data are assigned *ICD-9-CM* List B groups on the basis of the principal procedure. The principal procedure is one that was performed for definitive treatment rather than one performed for diagnosis or exploratory purposes, or was necessary to take care of a complication.[2]

Definition of Multiple Diagnosis Patients

Patients are classified in the multiple diagnosis category if they had at least one valid secondary diagnosis in addition to the principal one. The following codes are not considered valid secondary diagnoses for purposes of this classification:

1. Manifestation codes (conditions that evolved from underlying diseases [etiology] and are in italics in *ICD-9-CM* Volume 1)[3]
2. Codes V27.0-V27.9 (outcome of delivery)
3. E Codes (external causes of injury and poisoning)

Definition of Operated Patients

In the diagnosis tables operated patients are patients who had at least one significant surgical procedure. The procedure may or may not relate to the principal diagnosis.

In the procedure tables operated patients are those whose principal procedure fell into an *ICD-9-CM* List B group where at least one significant procedure was present. These tables contain procedures which are either therapeutic to the principal diagnosis or the only procedure listed.

While most List B groups contain only significant procedures, the following tables contain significant, as well as other procedures: 547, 556, 575, 576, 582, 587, 609, 615, 621, 628, 632, 641, 652, 653, 661, 674, 687, 690, 694, 698, 704, 716, 717, 774, 775, 777, 778, 782, 783. Because of their mixed composition, these tables are included for information purposes only.

List B tables which contain no significant procedures are identified with a disclaimer explaining why these tables cannot be used for purposes of examining length of stay.

---

[1] *ICD-9-CM List A: Hospital Diagnosis Groups* and *ICD-9-CM List B: Hospital Procedure Groups* are based on the *International Classification of Diseases, 9th Revision, Clinical Modification*, Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1989.

[2] As defined by the American Hospital Association in the 1984 Revision of the Uniform Hospital Discharge Data Set.

[3] *International Classification of Diseases, 9th Revision, Clinical Modification, Volume 1, Diseases: Tabular List,* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1989.

EXPLANATION OF THE STATISTICS

The List A diagnosis group titles and List B procedure group titles heading the tables are followed in parentheses by the *ICD-9-CM* diagnosis or procedure codes included in that List A or List B group. Supplemental *ICD-9-CM* codes for specified diagnosis and operation groups are provided in Appendix D.

Data are categorized by total number of patients, average length of stay, variance, and distribution percentiles. Patients are stratified by single or multiple diagnoses (Dx), operated or not operated status, and age. In addition, two subtotals and a grand total are included.

Total Number of Patients

This number represents the total number of patients in the stratified group. Patients with stays over 99 days (99+) are not included.

Average Length of Stay

The length of stay is calculated from the admission and discharge dates by counting the day of admission as the first day. The average is figured by adding the lengths of stay for each patient and then dividing by the total number of patients. Patients discharged on the day of admission are counted as staying one day in the calculation of average length of stay. Patients with stays over 99 days (99+) are excluded from this calculation.

Variance

The variance is a measure of the spread of the data around the average. The smallest variance is zero, indicating all lengths of stay are equal.

When using tables in which there is a large variance, and the patient group size is relatively small, the average stay may appear high. This sometimes occurs when one or two patients with long hospitalizations fall into the group.

Distribution Percentiles

A length of stay percentile for a stratified group of patients is determined by arranging the individual patient stays from low to high. Counting up from the lowest stay to the point where half of the patients have been counted yields the value of the 50th percentile. Counting off one-tenth of the total patients gives the 10th percentile, and so on.

The 10th, 25th, 50th, 75th, 90th, 95th, and 99th percentiles of stay are displayed in days. If, for example, the 10th percentile for a group of patients is four, it means that 10 percent of the patients stayed four days or less. The 50th percentile is the median. Any percentile with a value of 100 days or more is listed as 99+.

Patients who were hospitalized 99+ days or longer are not included in the total patients, average stay, and variance categories. The percentiles, however, do include these patients.

Subtotal and Grand Total

The subtotal represents the total patients in each of the single or multiple diagnosis, operated or not operated categories. The Grand Total represents the total number of patients in the specified diagnosis or procedure category.

USING THE TABLES

The Length of Stay series can be used as a valuable supplement and reference in a variety of healthcare settings. Use of hospital stay data as an inpatient utilization measure allows the healthcare professional to compare regional and national norms to an individual institution or special population. The Length of Stay series assists in:

- projecting extended stay reviews,
- identifying candidates for utilization review,
- establishing baselines,
- developing forecasts, and
- service planning.

The following steps provide a guide for healthcare professionals to obtain specific length of stay norms by using one of the Length of Stay regional or national volumes:

Step 1: Consult the Diagnosis or Operation Index at the back of the book to determine the group number of the particular diagnosis or operation to be reviewed.

Step 2: Find the corresponding group number (table number) in the Length of Stay tables; the group number precedes the title of each table.

Step 3: Find the appropriate portion of the table for review:

- Single or Multiple Diagnosis
- Not Operated or Operated (for Diagnosis groups only)
- Patient's Age (on day of admission)

Step 4: Find the 50th percentile of stay for similar patients at the point where the 50th percentile column of the table intersects the horizontal line containing the pertinent patient variables.

Step 5: Consult the total patient sample and variance to consider the homogeneity of the data, i.e., to what extent length of stay averages are clustered or spread out within a particular patient group.

These general steps can be followed, with more specific applications, by healthcare professionals in many diverse settings.

[3] The percent of hospitals may be underestimated since the 1989 sample is compared to the universe of hospitals in 1988.

APPENDIX B

DESCRIPTION OF HOSPITAL CHARACTERISTICS

Region and Census Division

The regional volumes of the Length of Stay series are defined by four census regions: Northeast, North Central, South, and West.

Location: Urban/Rural Hospitals

Urban hospitals are those with a metropolitan statistical area designation on the 1988 AHA Annual Survey of Hospitals magnetic tape. Hospitals without a metropolitan statistical area designation represent rural hospitals.

Teaching Intensity

The teaching designation is determined by a weighted index measuring program intensity developed by Phillip and Hai.[1] The index is based on programs, memberships, and affiliations approved by various bodies. The approvals incorporated in the index are:

- Accreditation by Joint Commission on Accreditation of Healthcare Organizations
- Cancer Program approved by American College of Surgeons
- Residency approved by American Medical Association
- Medical School Affiliation reported by American Medical Association
- Hospital-controlled professional nursing school, reported by National League for Nursing
- Member of Council of Teaching Hospitals of the Association of American Medical Colleges

Based on this index, hospitals are classified by one of three teaching status groups:

1. Low Teaching Intensity Hospitals
2. Medium Teaching Intensity Hospitals
3. High Teaching Intensity Hospitals

Index

Part I: Diagnosis Index
Part II: Operation Index

If a diagnosis or operation does not appear in the Index, its corresponding *ICD-9-CM* code can be found in the *International Classification of Diseases, 9th Revision, Clinical Modification,* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1989, *Volume 2 Diseases: Alphabetic Index* or *Volume 3 Procedures: Tabular List and Alphabetic Index*. New *ICD-9-CM* codes added in 1989 are reflected in this index.

551	uvula
690	vagina
557	vocal cord
691	vulva
518	Blepharorrhaphy
781	Blood transfusion, except intrauterine exchange
704	intrauterine exchange
585	Bone marrow transplant
760	Breast augmentation
696	Breech extraction for delivery
566	Bronchoscopy
713	Bunionectomy
745	Bursectomy, except of hand
743	hand
741	Bursotomy
	Bypass, graft or shunt
572	aortocoronary
578	blood vessels (systemic), except for renal dialysis
580	for renal dialysis
572	coronary

Group No.	Title
	Bypass, graft or shunt (continued)
597	gastric
572	heart
582	heart-lung
602	intestine
597	stomach
638	urinary
781	Cancer chemotherapy
	Cardiac
573	catheterization
576	electrophysiologic stimulation studies
783	function tests
576	mapping studies
	massage
781	closed
575	open
574	pacemaker insertion or replacement
575	revascularization, except coronary bypass
572	coronary bypass
783	stress tests
581	Carotid thromboendarterectomy
509	Carpal tunnel decompression or release
778	Cast application
774	C.A.T. scan
526	Cataract extraction, except intracapsular
525	intracapsular
	Catheterization
654	bladder, except suprapubic approach
644	suprapubic approach
582	blood vessel
573	cardiac
512	spinal canal (for infusion of agents)
651	ureteral
654	urethral, indwelling

OPERATION INDEX (continued)

Group No.	Title
	Catheterization **(continued)**
587	vein, except umbilical
582	umbilical
677	Cerclage, cervix
700	Cesarean section, except low cervical
699	low cervical
728	Chemonucleolysis
781	Chemotherapy
775	Cholangiogram (intravenous) (percutaneous)
616	Cholecystectomy
775	Cholecystogram
619	Cholecystotomy
782	Circulatory monitoring
664	Circumcision, except newborn
	Closure
619	cholecystostomy
602	colostomy
	fistula-*see Fistulectomy*
597	gastric anastomosis
602	sigmoidostomy
569	thoracostomy
640	ureterostomy
646	urethrostomy
600	Colectomy
567	Collapse of lung, surgical
609	Colonoscopy
603	Colostomy, except loop
601	loop
689	Colporrhaphy, except for cystocele or rectocele repair
688	cystocele or rectocele repair
774	Computerized axial tomography (C.A.T. scan)
675	Conization of cervix
520	Conjunctivoplasty
783	Consultation
777	Continuous positive airway pressure (CPAP)
	Control of hemorrhage
644	bladder
	Control of hemorrhage **(continued)**
582	blood vessel
568	chest
629	laparotomy site
543	nose, except by anterior packing
556	anterior packing
568	pleura
582	postoperative, not elsewhere classified
657	prostate
591	stomach, except by endoscopic approach
597	endoscopic approach
555	tonsil
521	Corneal transplant
572	Coronary bypass
777	CPAP (continuous positive airway pressure)
503	Cranioplasty
502	Craniotomy
676	Cryoconization, cervix
690	Culdocentesis
690	Culdoscopy, except for tubal ligation
672	tubal ligation
523	Cyclocryotherapy (eye)
523	Cyclodialysis
644	Cystectomy (bladder)
688	Cystocele repair
641	Cystoscopy
644	Cystostomy
644	Cystotomy
683	D and C (uterus), except for termination of pregnancy
682	termination of pregnancy
519	Dacryocystorhinostomy
	Debridement
763	burn (skin), except nonexcisional
764	nonexcisional

OPERATION INDEX (continued)

Group No.	Title
	Debridement (continued)
715	fracture, except of femur and skull
714	femur
502	skull
768	nail, nail bed, nail fold
